Gurgen Varzhapetyan

Software Engineer | Full-Stack Development

Gyumri & Yerevan, Armenia | Open to international remote & relocation opportunities

gurgenvarzapetyan@gmail.com | +374 94 188 674 | linkedin.com/in/gurgen-varzhapetyan-b9087120a

PROFESSIONAL SUMMARY

Software Engineer with hands-on experience building production web applications, B2B SaaS platforms, APIs, automation tools, and complex business systems. Experienced across frontend, backend, database architecture, authentication and authorization, multi-tenant systems, scheduling, public booking, web scraping, and cloud-backed services. Uses AI-assisted development tools such as OpenAI Codex and Cursor to accelerate implementation, debugging, research, and refactoring while retaining engineering ownership over architecture, security, and final code quality.

CORE SKILLS

Languages	TypeScript, JavaScript, Python, SQL, HTML, CSS
Frontend	React, Next.js, responsive web applications, reusable component systems, dynamic website builders
Backend	Node.js, NestJS, REST APIs, authentication, sessions, RBAC, multi-tenant business logic
Data	PostgreSQL, Redis, Prisma, TypeORM, database modeling and migrations
Cloud / DevOps	AWS (RDS, S3, SES, ElastiCache), Docker, Git, CI/CD workflows
Automation / AI	Web scraping, browser automation, OpenAI Codex, Cursor, AI-assisted engineering workflows

PROFESSIONAL EXPERIENCE

Software Engineer • Brain Fors

Jul 2022 - Present

Gyumri / Yerevan, Armenia

- Progressed from frontend-focused development into full-stack engineering across production systems, APIs, databases, architecture, integrations, and cloud-backed services.
- AestheticHubPro: took major responsibility for backend development and database architecture for a large B2B SaaS platform serving medical/aesthetic businesses; implemented complex role/permission access control, scheduling, public booking, multi-tenant workflows, and business logic.
- Designed and developed AestheticHubPro's dynamic website builder across frontend and backend, using reusable predefined components, configurable content, and multiple templates.
- Upstart: contributed to frontend development and built backend functionality for ticketing, bilingual courses, QR-code workflows, participant registration/approval, and event-entry verification.
- Built multiple data-collection and web-scraping scripts for third-party websites, including automation for technically restrictive and CAPTCHA-protected flows.
- Contributed to internal production-grade applications actively used by multiple companies and end users, working with evolving business requirements, integrations, maintenance, and production constraints.
- Integrated OpenAI Codex and Cursor into day-to-day development to accelerate research, implementation, debugging, refactoring, documentation, and repetitive engineering work.

SELECTED PROJECTS

AestheticHubPro

B2B SaaS platform for businesses providing medical, aesthetic, and wellness procedures, designed to centralize operational workflows in one system.

- Backend architecture and database structuring for a large multi-user, multi-location SaaS product.
- Strong role- and permission-based access control, scheduling and appointment logic, public online booking, and customer-facing workflows.
- Full-stack development of a dynamic website builder with reusable components, configurable content, and multiple templates.

Upstart

Course and event management platform provided by UEICT, enabling organizers to publish opportunities and manage the complete participant registration flow.

- Supports registration, approval, digital ticket issuance, QR-based verification, and event check-in/staff verification workflows.
- Supports bilingual course content and both educational programs and large events.
- Used for the full registration and ticketing flow of the annual Silicon Mountains forums and expos.

ADDITIONAL PRODUCTION WORK

- Developed frontend functionality for the Global IT Awards website and other public-facing web projects.
- Worked on production applications actively used by companies and end users, spanning feature delivery, debugging, integrations, maintenance, automation, and data-collection workflows.

Web Developer • LifeBeget

Nov 2021 - May 2022

Earlier project-based collaboration began in May 2019

- Gained early commercial web-development experience while continuing formal education, working on real client and production-oriented tasks.
- Transitioned from earlier project-based collaboration into an official role in November 2021.

EDUCATION

National Polytechnic University of Armenia

2021 - 2025

Applied Mathematics and Computer Science

Armenia

- Studied in a state-funded, tuition-free program while simultaneously working professionally in software development.
- Graduation project: training and evaluating AI-controlled agents inside the Unity game engine, using a simulated environment as a controlled and safe space for learning, experimentation, and task performance.
- University is listed with H+ status in Germany's Anabin database.
